

2020 Conference Announcement on Obesity and Diabetes

Mohammed Ayoub

Molecular pharmacologist, Department of Biology, The United Arab Emirates University, UAE, E-mail: mayoub@uaeu.ac.ae

Diabetes mellitus, frequently known as diabetes, is a group of metabolic disorders characterized by a high blood sugar level over a long period. Symptoms of high blood sugar include frequent urination, increased dehydration, and increased hunger. If left untreated, diabetes can cause many complications. Acute complications can include diabetic ketoacidosis, hyperosmolar hyperglycemic state, or leads to death. Serious long-term complications include cardiovascular disease, stroke, chronic kidney disease, foot ulcers, and damage to the eyes.

Obesity is a complex disease involving an excessive amount of body fat. Obesity isn't just a cosmetic concern. It is a medical problem that increases your risk of other diseases and health problems, such as heart disease, diabetes, [high blood pressure](#) and certain cancers. Obesity results from a combination of inherited factors, combined with the environment and personal diet and exercise choices. Obesity causes or is closely linked with a large number of health conditions, including heart disease, stroke, diabetes, high blood pressure, unhealthy cholesterol, asthma, sleep apnea, gallstones, kidney stones, infertility, and as many as 11 types of cancers, including leukemia, breast, and colon cancer. Specific public health actions and tools are applied to these diseases, mainly those who are aiming to get rid of this worldwide disease.

We gladly welcome attendees all around the world for the hearing of the leading recent innovations and inventions in the field of Diabetes, Obesity, Endocrinology and [Metabolism](#). This [Diabetes Conference 2020](#) will provide a forum for exchange of ideas and authoritative views by leading scientists, trade specialists and from the academicians of the best institutes from around the globe.
