Nutrition disorders are associated with several of the most important public health problems worldwide. These disorders are particularly serious in children, and may predispose to many health problems, such as infection and chronic disease. Additionally, in adult population are associated with cardiovascular disease, cancer in multiple organ systems, and metabolic diseases. Moreover, teenagers and senecta people are a particularly vulnerable population where research must to increase. Journal of Obesity & Eating Disorders emerged from the vision to support the rapid and reliable publication in the field of obesity, eating disorders and weight management. Therefore, we invite investigators in this field to contribute with different kind of articles that will enhance our continuing effort to understand and discuss all the aspects of different topics applicable in population of low- and middle-income countries and developed countries.
